## Announcing the **FILL-PRO** System

(replaces the Bag-In-Crate and Refill Bags)

**Easier to dispense...**

**Easier to refill...**

**Easier to handle...**

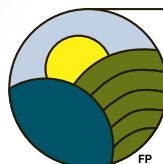

- ★ Saves time
- ★ No mess
- ★ Easy refills
- ★ Durable
- ★ Economical
- ★ Built-in handle
- ★ Easy-to-use spigot

# **FILL-PRO** + **Urine Off**

**Bulk Liquid Dispensing System**      **Professional Concentrates**

USDA  
CERTIFIED  
BIOBASED  
PRODUCT  
PRODUCT 74%

**Urine Off Professional Concentrates** work using specialized enzymes and bacteria to break down the components of urine that cause stains and odor. Available in Bathroom Cleaner, Multi-Purpose, Laundry Pre-Treat and Urinal Fresh formulations! Convenient concentrate refills make 5 gallons of RTU cleaning solution.

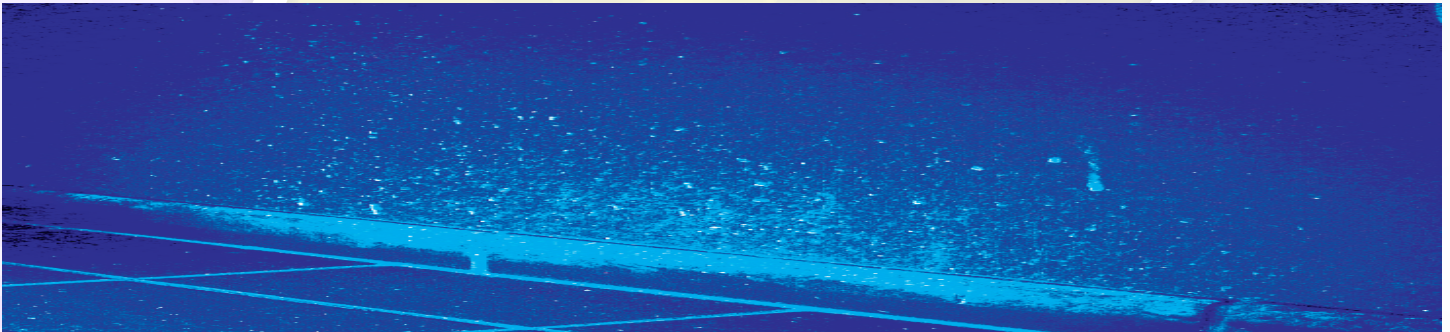

## URINE IS THE PROBLEM

Attaining and maintaining a truly hygienic condition in kennels and other pet facilities has become a major focus of the industry. Areas that have been soiled – especially with feces and urine – can serve as breeding grounds for disease and infection. Some contaminants are extremely difficult to remove once they have dried, and, in the case of urine, have formed a nearly insoluble crystalline structure that binds organic soils to the surfaces.

Urine is comprised of urea, uric acid and urochrome. It has proven to be one of the most challenging substances to permanently eradicate. Typical commercial cleaners remove urea and urochrome without destroying the uric acid crystals. These insoluble crystals remain, and can be reactivated by moisture, thus reinvigorating powerful odors. The majority of commercial cleaners which promise to remove the odors associated with urine simply mask the smell or remove odors temporarily.

Most commercial cleaning compounds work through the process of either sanitization or disinfection. Both processes use chemicals, such as ammonia or peroxide, to kill microorganisms. In order to do so, the cleaning substances must be toxic – not only to germs, but also to humans and animals!

*Using the Urine Finder Black Light, urine is shown on a baseboard at a kennel.*

## URINE OFF IS THE SOLUTION

In contrast, Urine Off works by “eating” uric acid and proteins, removing the growth environment needed by germs. Urine Off permanently eradicates odors and stains by destroying the insoluble uric acid crystals. Surprisingly, even old stains and their accompanying recurrent odors can be eliminated using Urine Off. Originally developed to abolish the odors caused by urine and feces in the poultry industry, Urine Off uses bio-enzymatic technology to consume the uric acid crystals, the primary source of odors. Made in the USA, Urine Off is a USDA Certified Biobased Product, and also carries the Carpet and Rug Institute Seal of Approval.

Urine Off is available in many convenient sizes. In order to better serve janitorial, sanitation, and healthcare professionals and other end users, Urine Off has developed the new Fill-Pro Bulk Liquid Dispensing System: a simple refillable container that lowers the cost of Urine Off by using a concentrated formula to avoid shipping heavy water. The Urine Off Professional Concentrates guarantee removal of uric acid crystals and the elimination of stains and odors caused by urine. The Fill-Pro dispensing carboy is the easiest way to handle Urine Off cleaning fluids for daily cleaning. Its translucent design allows for quickly checking the content level, and its five gallon capacity is ideal for high volume users. Refilling is easy as well: simply pour one jug of concentrate into the durable carboy, then add water to make five gallons of premium professional ready-to-use solution.
